1. The maximum input voltage is the upper limit of the DC voltage. Any higher input DC voltage would probably damage inverter.
 2. Any DC input voltage beyond the operating voltage range may result in inverter improper operating.
 3. SUN2000-50KTL-M3 raises potential between PV- and ground to above zero through integrated PID recovery function to recover module degradation from PID. Supported module types include: P-type (mono, poly), N-type (nPERT, HIT)
 4. 50KTL Platform only supports C&I Optimizer(MERC-1100/1300W-P).
